

## Pricing Details: Multi-User Mode\*

\* When running in **Multi-User Mode** there can be any number of users simultaneously accessing the Project files. When running in **Single-User Mode** the Project file must be located on that user's PC and only they may access it.

### Price    Component

- \$395**    **Read-Write Interface of the product (Multi-User Mode per PC installation)** – the Full Read-Write version of the *Requirements Management Database* is installed on each client PC and is suitable for “producers” of requirements such as Product Managers, Engagement Managers, and Project Managers.
- Free**    **Read-Only Interface of the product (Multi-User Mode per PC installation)** – the product automatically reverts to Read-Only mode after the evaluation period expires. It offers all filtering and reporting.
- Free**    **Microsoft Project Synchronization** – the Microsoft Project Synchronization Wizard allows a Project Manager to work off the same Project File and assess the resource/schedule impact of different scenarios.
- Free**    **Web Interface version of the product (Multi-User Mode site license)** – a simplified Web Interface to the Project File is provided. It is suitable for a company's Intranet and targets the “consumers” of requirement.
- Free**    **Custom Process Module** – a special plug-in connected to the same Project File and pre-configured to conform to a custom process. The **Blackblot** Procedural Requirements Management (PRM) process has been included as a Custom Process Module within the installation.
- Free**    **Open Data Structure** – the **Project File** offers an open data structure to give the user tremendous flexibility in configuring the *Requirements Management Database*. The user can:
- add data directly to the Project File (useful for advanced importation of data)
  - create new tables and fields, design new forms and reports
  - integrate into an existing enterprise database, link to other project management tools
  - develop new web-pages
- Quote**    **Setup costs** – the setup of the application interface in a LAN environment is typically so simple that no additional setup fee is usually needed. Simply place the Project Files on a fast network drive and select [File][Open] from each application interface to access the project data.
- Free**    **28-day product evaluation** – download the *Requirements Management Database* directly from our website (<http://www.reqdb.com>) and immediately enjoy a free 14-day product evaluation. We will extend your product evaluation upon request for a total of 28-days.
